- 17:45—18:30 The Unveiling of 'Rosie'  
Live & Interactive Demonstrations of  
Steamatics latest technologies...
- 18:30—20:00 Refreshments

## The Launch...

### High Volume Vacuum Freeze Drying

'Rosie' is the largest vacuum freeze dryer in the southern hemisphere, an exciting new resource for disaster recovery, water damage restoration and exhibit maintenance.

This technology is unique to Steamatic and offered unprecedented support for recovery and restoration whenever disaster strikes.

No other process can arrest the deterioration of water damaged documents and artifacts like Rosie can.

From maps, books, artworks, museum pieces, legal documents, business records, microfiche, x-rays, textiles, tapes, manuscripts... the list is endless.

The material we receive will be returned without the water.

Cost of restoration is low, particularly compared to the value of various items and information.

You have to see it, to believe it!

### Desiccant Dehumidification

Steamatic have joined forces with world renowned DH Technologies to offer access to this technology Australia wide.

Learn more about large scale desiccant dehumidification.

'Experience' the drying capabilities of this industrial technology.

Efficient drying of domestic homes, commercial properties to multi-storey complexes.

Minimal business disruption and interference.

Business interruption savings.

Drying time is significantly reduced.

Cost is low compared to replacement/ reconstruction.
