GLOBAL MITIGATION

When there are multiple stakeholders in a project, it can be difficult to manage the outcome. But when we recognise that our goals are the same, working together can make a big difference.

That's what Steamatic's disaster strategy is all about. We work collaboratively with all parties in a recovery project to ensure all needs are understood and that the best remediation technologies are deployed.

Our workforce of field experts can provide accurate, upfront information to assist stakeholders to make informed recovery decisions, including:

- Initial Mitigation Strategies
- Restoration vs Replacement Cost Reports
- Project Timeline Management – GANTT Charts
- Stock Valuations
- Causation Reports
- Salvage Options and Valuations
- Business Interruption Reduction Strategies.

Transparent

Cost Effective

Collaborative

Steamatic Global Recovery is the commercial services arm of Steamatic Australia. Operating in Australia since 1986, we have provided property restoration solutions for some of the largest, most complex and technical losses locally and off shore. With over 30 locations in Australia and 16 international locations, we have the ability to handle multi-million dollar losses. Our expertise and depth of resources make us the largest and most experienced restoration provider in Australia.

WHY CHOOSE SGR?

- After a catastrophe strikes, time is of the essence to avoid secondary damages and business interruption. SGR has disaster response centres throughout Australia enabling us to quickly mobilise to begin restoration services and get a business back up and running with limited down time. We offer you peace of mind to know that your business, facility or client are being well taken care of by the industry experts.
- Our highly trained Commercial Assessment Managers utilise their knowledge and expertise in the field to set a restoration reserve, thereby letting the material interested parties know if the loss will fall underneath their excess or prepare for an insurance lodgement. SGR offers pre-approved pricing for works that fall under the excess and/or fall under the self insured retention.
- We utilise the latest technology to quickly transfer information from the field to the office, speeding up the process and saving valuable time.
- SGR's real time communications keeps all interested parties informed of the next steps.
- SGR offers a Pre-registration priority service for clients that have potential risks for loss. We gather the pertinent information and enter it into our database to streamline the process when a loss occurs to avoid confusion and save time. The client will have increased peace of mind if they are already familiar with the restoration experts that will be attending their loss. Their expectations of the restoration process will already have been met pre-loss. During this process, SGR will have the opportunity to understand the pain-points that a particular client may have and what is most important to them.
- SGR is a certified member of all relevant global industry associations.
