

STEAMATIC BIOSWEEP IS FAST AND TOTALLY EFFECTIVE

ODOUR AND BACTERIAL ERADICATION

THE MOST FLEXIBLE DECONTAMINATION TECHNOLOGY

Decontamination of sites that home any sort of bacterial or viral infestation can be a challenge. Contamination can permeate any area, especially in confined spaces, equipment and over large surfaces. Regular treatment usually requires additional clean-up which is costly and time consuming. Steamatic's BioSweep is an innovative decontamination technology using an advanced form of Photocatalytic Oxidation that destroys viruses, bacteria and fungi. It penetrates the entire space of an infected area, so there's nowhere for pathogens to hide.

It's safe, cost-effective and permanently removes odours within all internal environments. BioSweep is a decontamination system designed to eradicate pathogens, odours from fine particulate matter such as aerosols, smoke fumes, dust, ash, pollen and volatile organic compounds. BioSweep eradicates surface bacteria and germs resulting in clean, healthy and safe indoor environments.

The BioSweep system is unique

To permanently remove odours and make indoor spaces safe again, the BioSweep system uses advanced photocatalytic oxidation to produce ultra-high levels of vapour-phase hydrogen peroxide, purified ozone and hydrogen radicals. The five-step photocatalytic oxidation system effectively eliminates particles at the molecular level and no residue to clean-up. These three active elements are unsurpassed for their power to remove virtually any embedded or persistent odour in a confined space and restore healthy indoor air quality and minimise the likelihood of re-infestation.

The benefits of using BioSweep include:

- Reduces the need for destructive building structure removal
- Reduces surface cleaning for deodorisation
- Eliminates the need for encapsulation and sealants
- Restores most contents on-site
- Extremely fast treatment times
- Removes odours permanently.

There's never been a more important time to manage structures for health and safety reasons. Steamatic's BioSweep is the perfect tool for fast, non-invasive decontamination and odour removal of anywhere that demands safe, fit-for-purpose facilities.

BioSweep has a wide range of applications

BioSweep provides odour eradication and decontamination services for a wide range of pathogens impacting virtually any indoor environment. Our trained personnel will conduct thorough and monitored application for safety and quality assurance. From water and smoke damaged buildings to sanitising public spaces, even vehicles, BioSweep is the most effective means of destroying harmful bacteria, the risks they pose and removing unpleasant odours permanently. BioSweep can be easily and quickly deployed and has a wide range of applications:

- Homes and flats
- Hospitals, clinics and nursing homes
- Hotel rooms
- Restaurant and bars
- Offices and workplaces
- Public waiting rooms
- Locker rooms and toilets
- Hi-tech clean-rooms
- Training equipment
- Boats and cruise ships
- Aircraft interiors
- Buses and cars

BioSweep is environmentally friendly, non-corrosive and leaves no residue.
